

Exploring sensory and social differences in autism and anorexia nervosa

What factors, such as sensory or social differences, affect anorexia nervosa? We want to hear from you if you are 18+ and are:

1.

An autistic individual with current or lifetime history of anorexia nervosa

2.

A non-autistic individual with current or lifetime history of anorexia nervosa

We would like to carry out interviews with you **and** your parent or caregiver, together at the same time, over the phone or on an online platform of your choice.
